A good gamepad for your PC can make a long way, which you like to play retr o, emulated games, prefer to play arcade titles with a gamepad, or simply prefer the feeling of a controller for some games and a keyboard and a mouse for others. The fact is that there are so many gamepads to choose from what finding a good one can be difficult. This week we're looking at five of the best, based on your nominations. Earlier this week, we asked you which PC Gamepads you think are the best. We're not knocking on the keyboard and mouse here, but sometimes it's fun to turn on a little bit. You came back with some clear favorites and some others worth digging. We got more nominations than we can highlight here, but here are the five best choices: if you prefer the game on your PC, it has built a Power Powered Raspberry game console, built in... Counting Morethe polls and votes are counted! To see which of these five great gamepads took the crown, go to our five follow-up posts to read all about the winner! When a keyboard and a mouse is not the best tool for the game you want to play, you have a lot of... The Xbox 360 controller is probably one of the most comfortable controllers available, and the fact that there are wires and wireless USB versions for PC games bring joy to players who prefer to sit in front of their monitors rather than their TV screens. The 360 controller has been designed in mind of ergonomics, and designed in a way that is convenient to keep, even for long periods, although how much you agree with that depends very much on your preferences and personal tastes. The controller also has a feedback of the sports vibrations, a nice long USB cable in the cable model and the drivers are all but pre-packaged with Windows 7 and Windows 8, so the installation is Snap. Getting it to work on a Mac requires third-party software, but it's not too difficult to do even. They are available for around \$ 25 in Amazon, which is definitely down its selling price \$40. G/O Media can get a commissioning Those of you who have named the Xbox 360 controller have praised its comfortable design, satisfying-a-press and non-squishy buttons (although the D-pad has always been and still is a problem for many people), its great driver support, and the fact that if you're playing a modern title on your PC with a game controller, it's a safe bet that using the Xbox 360 controller will make the mapping buttons and commands easy, if it doesn't work alone. Sony DualShock 3 Controller Sony DualShock 3 controller is the same controller you ship with the Playstation 3 is also one of your favorites. How comfortable it is is actually a topic of massive discussion. Some people love it, some hate it, but not too many people prefer it to more ergonomic models. However, being bulky and too heavy, it is ergonomically designed and comfortable in the hand, and packs a ton of useful features. You can adjust the sensitivity of Sabertoth buttons and sticks, the buttons have a solid click on them, the rocker detonators are stopped, and the Sabertoth also comes with more rocker buttons on the bottom of the controller that the Xbox 360 controller itself does not have. All buttocks including extra honest226: "What?" "they are fully programmable, and also contains an OLED screen integrated below to help you see which menu or mode This supports Windows out of the box, will bring you back \$80 directly or Amazon, and for your investment you also get a controller that you can unplug from your PC and plug into your Xbox 360 at any time you wish. If the Rumblepad 2 and its successors emulate the look and feel of DualShock 3, the Sabertoth emulates the approach of Xbox 360 (which makes sense, because © works with Xbox 360). Those of you who praised it have made special note of the customizable buttons of Sabertoth, fixed buttons and solid construction quality. If you've had problems with the D-pad of the Xbox 360 controller, the Sabertoth is worth a look and it improves considerably. USB Retro GamepadsLet Console to be honest, most people who play on their PC use a keyboard and a mouse, and are more than happy to do so. If you don't really need a fantastic, high-tech controller, programmable for the few arcade style games, platforms, or action games that you want a controller for your computer, a USB version of the game controller will tell you that you love more can be in order. If emulated games are your thing, and you prefer to play classic school titles and old school games (whether on your PC or on a custom arcade machine powered by a Raspberry Bigger) you might prefer to use the controller for which the games in question were designed! Depending on what you want! (Many of you in the contender request specifically praised the SNES controller and the N64 controller, but they are not the only options.) If you are trying to relieve the past or experience the origin of the game you missed in your © Read more! Personally, I love the feeling of the old SNES controller, and while I have more advanced controller for my PC, sometimes I insert myself into my SNES USB controller and turn on MAME. You can get SNES USB controller for about \$10 in Amazon, but if you are even older school and you want the original NES controller, a good one will bring you back \$7 Amazon instead. Are you looking for something more A USB version of the classic N64 controller, for \$ 14 in Amazon. If you have the controller but you don't have a USB USB You can buy them instead. Here's one for the N64 controller, and one for the SNES. This \$7 double PS2-to-USB connector is equipped with a guarantee of life and works as a charm: What? I actually own this, so I can vouch for it. Depending on the games you want to play or the emulator you are using, you will almost certainly have to redo the buttons to the commands used in the game room or to adapt to the use of a controller different from what the game expects, but this is half the fun of playing II at the old school and classic titles on new hardware. Once everything's ready, you'll be on the run and you won't have to do it again. Now that you've seen the first five, it's time to vote everyone to determine the community's favorite: "This week the honourable mention goes to the Xbox One controller and the controllers of the Playstation DualShock 4, both of which more than some of you were excited about, even if they are not available. True, both controllers will probably have some PC compatibility not long after the consoles land on the shelves of the store in November, and both will probably represent updates to the current controllers of the console generation. We are willing to bet that if we do this survey again in one year, Xbox 360 and PS3 controllers will be dethroned by Xbox One and PS4 replacements. In addition, some of you have noticed that you have had the opportunity to play with the new console controllers at events such as PAX (the Penny Arcade Expo) and loved what you have experienced. Do you have anything to say about one of the contenders? You want to make the case for your favorite, even if it wasn't on the list? Remember, the first five are based on your most popular nominations since the call for thread contenders before the week. Don't just complain about the first five, let us know what your favorite alternative is and express your case for it in below. The Five Hive is based on readership nominations. As with most Hive Five post, if your favorite has been left out, it's not because we hate we hate because he didn't get the applications requested in the application to make the top five. We know it's a bit of a popularity contest, but if you have a favorite, we want to hear about it. Do you have a hint for the Hive Five?
