## What is the difference between a database and a data warehouse

What is the primary difference between a database and a data warehouse. What the difference is between a database a data warehouse and a data mart. What is the difference between a relational database and a data warehouse. What is the difference between a transactional database and a data warehouse. What is the difference between a database a data warehouse and a data set.

A data warehouse is a database used to store data. It is a central data repository in which source data is stored. A data warehouse is also known as a company data warehouse. The data warehouse is then used for relatives and data analysis. It can be used for the creation of tendencies for relatives for senior management relatives as annual and quarterly comparisons. The purpose of a data warehouse is to provide flexible access to the data to the user. Data storage usually refers to the combination of several different databases across the enterprise. The data store stores current data as well as historic, so that all relevant data can be used á ě à ě
