Amazon app download for android mobile apk. Amazon mobile delivery app apk. Amazon mobile app apk.

Each mobile number can only be associated with one Amazon account. Additional users can be invited to have access to the developer account (see Add Users to Your Organization's Developer Account). When you set up a new Amazon developer account, you are the default account administrator. You can request changes to your developer/company name by using the Contact Us form. Last updated: Nov 16, 2021. Fill out the information fields in the Developer Details and Contact Details sections. Payment Information Payment details, such as your bank name and routing number, required if you're monetizing your apps so that Amazon can send you payment. That means Amazon will not send messages to the email account associated with the person who submitted the app, unless that is the same one in the company profile. Go to Settings > User Permissions. Most importantly, any account administrator has the ability to manage user permissions, including inviting or removing users from the account. For example, in the following screenshot, "Lucy Smith" has two accounts: Lucy's Apps and ACME Apps. Q: How do I change the developer/company name for my account? To create a new Amazon developer account: Go to . The following are example uses for multiple accounts: You are a freelance developer who wants each client to have their own Developer Portal account. Go to . This agreement is required to distribute your app. Your company owns multiple companies or has multiple divisions. Company Profile Contact information for your company, including support contact information that can optionally be shown on your App Details page in your Appstore listing. (If this One Time Password dialog doesn't appear, your corporate VPN might be blocking the page. To change your contact information, sign in to the Developer Portal, go to Settings > My Account, and then click Edit to change your name, email, phone number, or password. Click Submit. Most of these fields are basic information fields that you can update later as needed. Try disconnecting from VPN.) Go to your email to retrieve the OTP. It may be that you are using the same number for two different Amazon accounts. If you do not have administrator permissions, ask the account administrator to make the changes. Your new user should not go directly to the Developer Portal to register, as this may create a separate developer account for the user.) You can see all users you have added to your account in Settings > User Permissions. In the upper-right corner, and click Contact Us. Alternatively, go directly here: Contact Us form. Complete the requested fields for your name, email, and password, and then click Create your Amazon Developer account. For more details about managing your developer account, read the sections that follow. When you later publish an app, you'll have the option to associate the Contact Details here for your App Details page in the Appstore listing. You can always read this legal agreement more carefully here: Amazon Developer Services Agreement. Change it as desired for your alternate profile. See Add Users to Your Organization's Developer Account for more details. Receiving Communications Amazon will send email only to the address listed in the company profile when corresponding with you about your app's status. You can also supply different contact details when you publish your app. You can also see your role, which is Administrator by default. Four options are available, each with unique permissions. Tax Identity Tax forms required in order to receive payments for digital content or if you're displaying ads. Fill out the required fields to create the new Developer Portal account. Developer: Outside of an Administrator, this is the only role that gives users the ability submit and adjust application files. If you already have an Amazon.com account but not an Amazon developer account, you can optionally sign in with your Amazon.com account. To confirm the email address in the company profile, anyone with administrative permissions can go to Settings > Company Profile to view this information. There's an option to use the same contact information as your account. After you add a user, the Developer Console sends an email invitation to the user. You're now signed in to the Developer Console and presented with a Developer Registration screen. Mobile Ads Fields for configuring ads from the Amazon Mobile Ad Network. On the backend, the Developer Console will automatically create a developer account using your Amazon.com email address, and then the two accounts will be tied together and synced. You can also add other administrators. Developer Portal Dashboard Note that the Developer Console acts as a configuration portal for a lot of different Appstore-related products. Other consoles build on the original permissions in the Appstore Developer Console. Switching Between Accounts The first user associated with the Developer Account is considered the owner and retains full rights to administer the developer account. You can change accounts by clicking your initials in the upper-right corner and selecting another account. User Permissions A list of users for the account. Sign in to the Developer Console, click the ? Each product often has its own configuration screens, tabs, and branding. Security Profiles A space to configure security profiles, which are used by services such as Login with Amazon. Watch the video tutorial to get started. To share your account with another user: Sign in to the Developer Portal. Create a Developer Account You must create an Amazon developer account in order to publish an app in the Appstore. Subtab Description My Account Your contact information, with options to change any details when you click Edit (name, email, phone number, or password). You can link the parent company to the new companies' Developer Portal account. Choose Your Account, then the Login & security option. Important: Make sure to use a unique "Developer/ company name" for the new account. You can add other people in other roles to the account, such as analyst, developer, or marketer. Q: How do I change the information Amazon uses to pay me? From here, you can see and edit your account information. The invited user clicks a link in the email to sign in to the Developer Portal. By default, the profile information for your current account is populated in the fields. To protect the security of your account, Amazon does not allow changes to your developer/company name. The number of tabs and subtabs you see in the Console depends on your role: administrator, developer, marketer, or analyst. In the Developer Console, go to Settings > Payment Information. Like the Marketer, this role also gives users access to sales reports. To link multiple accounts together, do the following: Log into your existing Developer Portal account. Q: When adding a mobile phone number, why do I get an error that the phone number is in use? Note that as an account owner, you are responsible for all activities that occur under the accounts you authorize. In the Amazon Developer Services Agreement section, click the link to read the agreement, and then click the I agree button. You can also assign each user a role that limits their permissions within your account. Note that developer account name changes will be immediately visible on your account but may take up to several days to appear on the retail sites. See Settings Subtabs for a brief description of the subtabs available here. When you submit an app, the General Information tab lists the contact information for the app. Click Sign In in the upper-right corner. An administrator sees all tabs; if you have been added to another account with a different role, you might see a restricted number of tabs corresponding to your role in that account. This feature makes it easy for one user to access multiple Developer Portal accounts without needing to manage multiple usernames and passwords. "ACME Apps" is a corporate account in which she is a developer. Click Add New. Analyst: Outside of an Administrator, this is the only role that gives users the ability to view earnings reports. You will be prompted to complete the registration profile pages in the Developer Console. See Two-Step Verification for Payment Info Access and Updating Your Mobile Phone Number for more details. FAQ Q: How do I contact Amazon if I have questions about my account? Choosing the correct user permissions for each user allows the account owner to control what each user can see or do in the company's developer account. (Note that the user will need to accept the account invitation via the emailed invitation link; this link will redirect your new user to the Developer Portal to complete the user creation process. Note that two-step verification is required to protect your payment information. All fields are editable except the Developer name or company name (see Change Your Developer Name or Company Name for details on how to change it). The following table shows the permissions by role. To switch between accounts, click your initials in the upper-right corner, select Change User, and select your new user profile. See Switching Between Accounts for more details. You can manage your Amazon developer account within the Appstore Developer Console. Marketer: Outside of an Administrator, this is the only role that gives users the ability to edit the content associated with apps (i.e. Descriptions, Images & Multimedia) and IAPs. Like the Analyst, this role also gives access to sales reports. In the following App details page for the Amazon Music app, the developer's name is "Amazon.com." If you need to change your developer/company name (after completing the account registration process), submit a request by clicking the ? Currently, a mobile number can be associated with only one Amazon account. Type the user's email address and select his or her role, button in the upper-right corner and selecting Contact Us. Provide your company's new desired name. Start exploring the console — this takes you to the Dashboard (shown below), which has quick links for common actions. A "Welcome" screen appears with options to customize your interests as well as received product information and updates. Identity A shared key used to configure services such as In-app Purchasing. Add Users to Your Organization's Developer Account If your company has multiple users who work on app development and submission, you can give them access to your company's account. To change a mobile number in an Amazon.com account, go to the Account & Lists section and sign in. Invited users will have the rights associated with the roles assigned to the user. You can use this feature to use a different company name, or brand, for each app category. Available roles are as follows: Administrator: This role grants complete access to all sections of the developer account, including reporting and payment information. On your App Details page, the email address and company site appear in a "Developer info" section, while the "Developer/Company name" appears below your app title. For example, the Alexa Skills Kit Console is available from the Dashboard: Links to access the Alexa consoles After you finish adding users and configuring roles, click Save. You can find your customer and vendor ID by doing the following: Create Multiple Profiles Under the Same Account You can create multiple developer profiles using one Amazon user account. Find Your Customer and Vendor ID At times, Amazon teams might need your customer and vendor ID in order to give access to certain programs or documentation pages using an allow list. Enter it into the Enter OTP field and click Create your Amazon account. "Lucy's Apps" is her own account for which she is an administrator. Click Create your Amazon Developer account. Now when the user logs in, he or she will see the same apps and other information as you (depending on the role you assigned to the user). However, note that the Developer/Company name field cannot be edited after you click Submit (except by filing a support case). See Add Users to Your Organization's Developer Account for details on adding or removing users. Change Your Developer Name or Company Name Your developer name or company name appears below your app title in the App details page. You're prompted to enter a One Time Password (OTP) sent to the email address you provided. Although any developer or administrator can submit an app, Amazon will send correspondence only to the email address in the company profile. For security purposes, you must confirm your identity through a One-Time Password (OTP) to view and edit the payment information. To remove a user from your organization's developer account, go to Settings > User Permissions, and click Remove access next to the user you want to remove. After the user accepts the invitation, their profile will be added to your company's account. However, if another developer has shared their account with you and assigned you a role, it will be listed here. Select the desired check boxes and then click one of the following: Continue completing your profile — this takes you to the Settings tab. The email comes from mas-deveportal-contactus@amazon.com and is titled "Amazon Developer Program Invitation from ". If Lucy switches to ACME Apps, where she is designated as a developer only, she sees just three subtabs under Settings: Settings Subtabs The following table briefly describes each of the Settings subtabs. Note that your account contact information isn't necessarily the same as your app's contact information. Only users with the administrator role can change payment information. Your company creates apps across multiple content categories. You can give other users permissions to your account, update your contact information, and more.
