## Gather video conferencing

By Catherine, Facy Staffupdated April 9, 2020Video conference is changing the way to work. Software and applications that allow workers at home or in the field to remotely connect with colleagues took a new type of productivity for meetings and teamwork. While zoom can be the most popular teleconference option, there are a lot of other tools and applications for connection teams. Each offers its own unique features, so it is worth exploring all of them and determine which is best for you and your team. This robust platform works as a double sense virtual meeting room for a maximum of 100 participants on the free version (there is a paid level that can accommodate up to 1000). Checked by those who host, there are useful functions such as 256 bit TLS encryption, private and group chat, screen sharing, and advanced programming. Both mobile and desktop versions are easy to use. And not just for work; Many exercise studios and learning institutions also use zoom to provide online lessons. VM / Getty Images Skype has been around for a long period of time, and have perfected their platform for one-a-one or meetings of small groups. Even the free version has ingenious features, such as the possibility of blur distraction (or embarrassing) wallpapers, live subtitling, and a recording function. For those who try to meet the larger groups, there is a premium service for businesses as well as one for educators. FILADENDRON / GETTY Images If the organization uses already Slack, you can be aware of the video call function. It is fantastic for individual calls or small groups directly from the application, which can be useful to coordinate activities and stages. The platform can also be integrated with other services the team can be used, such as Dropbox and Gmail. There is a free level as well as Enterprise versions with advanced encryption and features. Sanjeri / Getty Images This free service has the possibility of connecting small groups and teams via telephone or internet connection. Its most useful feature is moderating control, which can help meetings continue to move along. Another advantage is that there is no necessary downloads. The platform can be used through international borders, free with screen sharing and text chat included. Premium service, with greater security, it is also available. Jim Craigmyle / Getty Images Meeting places is a simple platform originally designed for friends and family to socialize. However, it can be useful for working groups where you can record sessions, shares screens, and use video or messenger modes, depending on the available bandwidth and traffic. It also synchronizes with the Google calendar, contact lists, analysis and other Google tools, which is useful for companies that use G Suite. Chesnot / getty images for small meetings and small groups, the level free of Uberconference should do makeup. For longer 45 minute sessions and teams larger than 10 people, Uberconference provides a low-cost business service complete with personalized waiting music. Both levels benefit from mobile use, document sharing, and recording features. Cecile arcurs / Getty Images Facebook is used for many things: stay in touch with the family, the connection with long lost friends, the sharing of funny videos, and more. But its live characteristic is increasingly used to reach large groups of people with broadcasts, live flows and demonstrations. A Personalize your own audience and pre-program public projections and events. During the event, participants can live chat and comment. And back-fitting platform functionality for a completely private meeting with many participants is easy to do. Filippobacci / Getty Images Another video streaming service that can be redefined for meetings and demonstrations, YouTube Live has the ability to accommodate large private live flows. Accessible through private connections, the event allows 2-way communication, automatic subtitles, and localization labels. As you could expect from this grandfather of platforms, support is complete and easy to access every step of the journey. VisualSpace / Getty Getty Even the free version of this Cisco meeting app is loaded with functionality to make group events run smoothly. Meet with a maximum of 100 team members using private chats, screen sharing and records everything for revision later. 1 g of cloud storage is included. Safety is impressive, with TLS 1.2 and AES 256-bit encryption and can be further improved with remote access VPN. VGAJIC / Getty Images Sturdy cloud-based videoconference is available with Bluejeans subscription. Apart from a 30-day initial procedure, there is no free level, but excellent basic features and HD quality can enforce the investment. With Dolby Voice supports and dashboard and planning functions, this app can be accessible without problems with operating systems, using mobile or desktop. Pirka / Getty Images Centered around completely customizable spaces, gathered makes time to pass with your communities just as easy as Real Life.get started for FreeJoin 10,000,000 people meeting on collection by Franki Colbert video camera by Rafalwit from Fotolia.com Video Conferencing provides educators and businesses with the opportunity to learn, share and interact through distances. Videoconferencing technology uses both the phone and a video camera. The camera is often connected to a laptop or desktop. Videoconferencing improves productivity and reduces travel time. Individuals using video conferences can share data with each other and transfer information such as photos or documents. Government agencies use videoconferencing in different ways, such as training employees, conduct meetings and leading employee assessments. The courts use technology to cut travel time for court participants. It is also used as a security measure added. Video conferencing software helps agencies by improving efficiency and logistics meeting. Video conferencing technology allows students to attend the classes remotely. Some colleges and universities offer completely online degree programs. This offers more flexibility to students and professors. Students and teachers can meet individually through videoconferences and teachers can contain online lessons. Students with video cameras can see the professors and other students with similar video equipment. Medical field professionals can use video conferencing technology to communicate with each other. Doctors can consult specialists regarding specific treatment options. They can send a patient to see a specialist for a specific disease and the specialist can practically meet with the reference doctor to discuss the test results and discuss potential treatment options. At international level, the use of videoconferencing involves the treatment of patients abroad and consulting medical professionals in other locations through videoconferencing. Corporate professionals often have to travel long distances to meet customers or colleagues. Videoconferencing allows them to meet virtually. Employees can work from home or anywhere else with an Internet connection and participate in meetings through videoconferencing. Lawyers can also use videoconferencing to also conduct meetings. To use video conferencing technology, people often have to install video conferencing software. Companies often buy and make this software available for employees who will have to use video conferencing. Users will need a computer and video webcam. This It connects directly to the computer. Conference rooms can often include video cameras connected to the room itself. Companies will also need to train employees to use video conferencing technology. technology. technology.
