## Click to verify

With the AppleIOS 14 update users got a new, although hacky way to customize their home screen with ios app icons. The functionality is still not native, but it did show what do the users want or have been missing. Some apps like Instagram even added a feature to natively change the app icon from their apps, which is really amazing. Any feature added costs money and resources for the company, development is pricey. They want to give the best user experience possible to their users and make them happy so it makes sense to help them. Apple may also add such home screen features in the future, maybe IOS 15 already, who knows. But the users really want to personalize and customize their phones and express their creativity. This post will talk about some IOS 17 Home Screen Ideas you can either get inspired from or copy. Table of Contents IOS 17 Home Screen Ideas First thing you need is to find some good app icon themes you like. This Calm icon set is one of the best and popular one out there at the moment and gives you 6 different themes to either use alone or mix and match. Be creative, use your imagination and don't forget to share your ideas. DownloadIOS 17 icons5 IOS 17 home screen aesthetic if you're not a graphic designer. There are a lot of design tools out there, but knowing the tool won't help you. You'd need to understand color theory, composition, layout, systems,... the design field can go really deep. Icons are just a small part of the whole field and there are people that specialize at doing just that. The above icons have been designed by a designer so they're extremely high quality. Here are some home screen ideas on how you can mix & match the icon themes to get a great looking screen. DownloadIOS 17 icons hereClean IOS black theme app icons with wallpaper ideaYou can achieve a really amazing hi-end aesthetic by using a black & white photograph as a background and use the black Icon setfrom the Calm themes. Here's a great example of such a home screenBest design of IOS 17 home screen themes Here's a list of some of the trending ios home screen themes you can find on the internet. Some were also featured on sites like PicMonkey, Mashable etc. so they're really popular. Best aesthetic designs where there's a theme for anyone. Some iPhone app icon themes with wallpapers also come with discount deals. Read this article that explains in detailhow to change IOS 17 app icons. With just a tap on a widget, you can add more functionality to your home screen, not just opening apps as shortcuts. Widgets are an aesthetic upgrade and a smart way to improve user experience. The 2 below are one of the best and also the first ones that came out so they're popular and have regular updates. If you search the App Store for widgets you will find loads more with the exact functionality and goal you want the widget to do. GetWidgetsmithGetColor WIdgets There are two ways on how to edit home screen IOS 17 widget, first one is to tap on the screen and hold until you see the - icons, then tap on the widget to open settings. The second way is to edit the widgets inside the original app, probably on a settings screen. With IOS 17 being new and these functionalities not being tested, things may change and improve in the future. But for now everything is a bit experimental. But the iPhone screens and widget use is going to increase in use and popularity quickly with new aesthetic styles. IOS 17 home screen setup with app icons. The problem here is that after a tap you see the Shortcuts app open, and then switch to the chosen app. You can use Icon Themer Really popular, but some people argue installing it may be unsafe as it's a 3rd party app and the way it customizes the IOS 17 icons is a bit hacky. Try the Launch Center Pro This one is on the App Store so it is safe and comes with some really great features. The Home Screen customization on iOS 18 is taking the world by storm. By rearranging the widgets and app icons, changing the tint, adjusting the size, and finding just the right wallpaper to go along with it, iPhone users around the globe are creating some seriously beautiful lock and home screen Monochrome Hollow Knight Home Screen (iOS 18) byu/Th3 Wrath iniOSsetups 2. Its a personal canvas that reflects your lifestyle, priorities, and aesthetic preferences. With iOSs customization features, you can transform this digital space into something thats both visually appealing and functionally efficient. Whether youre looking to minimize distractions, maximize productivity, or simply create a home screen that brings you joy every time you unlock your device, thoughtful organization can make a significant difference in your device, thoughtful organization can make a significant difference in your device, thoughtful organization can make a significant difference in your device, thoughtful organization can make a significant difference in your device, thoughtful organization can make a significant difference in your device, thoughtful organization can make a significant difference in your device, thoughtful organization can make a significant difference in your device, thoughtful organization can make a significant difference in your device, thoughtful organization can make a significant difference in your device, thoughtful organization can make a significant difference in your device, thoughtful organization can make a significant difference in your device, thoughtful organization can make a significant difference in your device, thoughtful organization can make a significant difference in your device, thoughtful organization can make a significant difference in your device, thoughtful organization can make a significant difference in your device, thoughtful organization can make a significant difference in your device, thoughtful organization can make a significant difference in your device, thoughtful organization can make a significant difference in your device, thoughtful organization can make a significant difference in your device, thoughtful organization can make a significant difference in your device, thoughtful organization can make a significant difference in your device, thoughtful organization can make a significant difference in your device, thoughtful organization can make a significant difference in your device, thoughtful organization can make a significant difference in your device and your needs and personalities. Explore: iPhone Camera Tricks To Know1. Minimalist Monochrome layout embraces simplicity through a carefully curated selection of essential apps against a neutral background. This removes visual clutter by limiting your home screen to only the most frequently used applications, perhaps just 8-12 icons total while relegating everything else to the App Library. Choose a grayscale or single-color wallpaper that creates a calm visual foundation, then complement it with monochromatic icons or custom icon packs in matching shades. The result is a distraction-free environment that reduces decision fatigue and creates a sense of digital calm. The absence of bright colors and excessive options helps users maintain focus on what truly matters. Explore: Pros & Cons of Jailbreaking An iPhone 2. Color-Coded Categories The color-coded categories layout transforms your home screen into an intuitive visual system by grouping applications according to their purpose, with each category assigned a specific color family. For example, you might place productivity apps like Calendar, Notes, and Mail in blue tones on another, and communication tools like Messages, WhatsApp, and FaceTime in green hues on a third. This chromatic organization creates a visual language that helps your brain quickly locate apps based on both their function and associated color, reducing the cognitive load of navigating your device. The approach works particularly well for visual thinkers and those who manage numerous applications across diverse aspects of their lives. 3. Single-Page Efficiency The single-page efficiency layout challenges you to distill your digital experience down to what truly deserves immediate access, fitting everything onto just one screen without scrolling. Start by identifying your non-negotiable apps, those you use multiple times daily and place them strategically in a grid or dock. Then leverage iOS widgets of varying sizes to provide glanceable information and quick access to secondary functions, such as calendar events, weather updates, and news headlines. The key to success with this layout is ruthless prioritization and embracing folders for logical groupings of less-frequently used apps. Also Read: iPhone Hacks To Make Your Battery Last Longer 4. Aesthetic Theme-Based The aesthetic theme-based layout transforms your home screen into a cohesive visual experience that reflects your personal style, whether thats minimalist Scandinavian, vibrant retro, dark academia, or pastel kawaii. Begin with a wallpaper that establishes your chosen aesthetic, then customize app icons to match using iOSs Shortcuts feature or dedicated icon packs. Complement these elements with widgets styled in harmonious colors and designs, creating a unified look across your entire home screen. This turns the functional necessity of organizing apps into an act of self-expression and visual pleasure. While it requires more initial setup time than other layouts, users find the effort worthwhile for the satisfaction of having a phone that feels personally crafted rather than mass-produced.5. Productivity DashboardThe produc calendar events, project timelines, habit trackers, and note-taking tools. Arrange your most-used productivity apps in easily accessible positions, while grouping secondary work tools in clearly labeled folders. Choose a clean, distraction-free wallpaper with minimal patterns that wont compete for attention with your informational widgets. This layout works particularly well for professionals, students, and anyone who primarily uses their iPhone as a work tool rather than for entertainment. The emphasis on information visibility rather than app hunting helps maintain focus on priorities and deadlines throughout the day. Also Read: Simple Ways To Free Up Space On iPhone 6. Time-Based OrganizationThe time-based organization layout aligns your home screen with your daily routine by arranging apps according to when you typically use them. Your first page might feature morning essentials like weather, news, calendar, and email apps for starting the day informed and prepared. The second page could transition to work-focused applications needed during business hours, while the third showcases evening leisure options at appropriate times. For maximum effectiveness, pair this layout with iOSs Focus modes, which can automatically transition between your customized screens based on time of day, location, or activity. This ensures that your morning coffee isnt interrupted by work notifications or your evening relaxation by productivity reminders. 7. Action-Centered DesignThe action-centered design layout prioritizes verb-based activities over specific apps, organizing your home screen around what you want to do rather than which app you want to open. Create intuitive folders with action-oriented labels like Create (containing note-taking, drawing, and writing apps), Connect (housing mediation, reading, and entertainment options). This task-oriented approach shifts your mindset from mindless app opening to purposeful engagement with your device. To enhance this layout, utilize iOS widgets that offer direct action buttons, such as starting a workout or sending a message. This further streamlines the path between intention and action and helps maintain mindfulness about how you use technology.8. Dark Mode Optimized The dark mode optimized layout embraces the sleek, battery-friendly aesthetics of darker color schemes while creating a visually cohesive experience that maximizes OLED screen benefits then carefully select apps and widgets that support dark mode natively. Organize these elements with generous negative space to create a sophisticated, high-contrast look where each element stands out clearly against the dark background. For apps that dont support dark mode, consider using custom icons or placing them on secondary pages to maintain visual harmony. This layout is particularly appreciated by night owls, those sensitive to screen brightness, and users seeking to reduce eye strain while maintaining a stylish, modern aesthetic that feels intentionally designed rather than simply functional. 9. Contextual Zones are layout divides your home screen into intuitive spatial regions that correspond to different types of activities or mental states. The top portion might contain widgets providing information you consume passively, such as weather, news headlines, and calendar events. The middle section could house communication tools for active engagement with others, while the bottom zone, easily accessible to your thumbs, features utilities and tools for quick actions. This spatial organization creates an intuitive map that you need. Some users take this concept further by creating dedicated pages for different contexts, such as work, home, travel, or creative projects, each with relevant apps and widgets positioned consistently across these contextual templates. Check Out: Can Apple Watch Charger Charge iPhone? 10. Seasonal Refresh The seasonal refresh approach embraces change by completely reimagining your home screen layout every few months to align with seasons, major projects, or shifts in your personal priorities.In spring, you might opt for a layout featuring productivity tools and habit trackers to support new goals, while summer could transition to a travel-focused design with maps, translation tools, and photo apps prominently displayed. Fall might emphasize educational resources during back-to-school season, and winter could highlight social connections and entertainment during holiday periods. This dynamic approach prevents layout fatigue, that sense of no longer seeing your home screen because youve grown too accustomed to it. It gives you regular opportunities to reassess which apps truly deserve prime digital real estate as your needs evolve throughout the year. Conclusion Your iPhone home screen is an intimate digital space that you interact with dozens of times daily. It deserves thoughtful curation that aligns with your needs, values, and aesthetic preferences. The layouts explored in this article offer starting points rather than rigid templates, inviting you to mix elements from different approaches to create a home screen experience that feels uniquely yours. As Apple continues to expand customization options with each iOS update, consider setting aside time periodically to reassess and refresh your home screen that let you see useful information without having to open an app. For instance, if you want to see the weather forecast or your upcoming calendar events at a glance, you can easily do it with a widget or any blank area on the screen. Any widgets or icons already on the screen should start to jiggle. If you have multiple home screens, swipe versions of the widget. When you find the one you like best, tap the Add Widget button. When youre finished, press the Done button at the top right side of the screen. Tap and hold widgets to edit or remove them, or tap, hold, and drag them to move them around. You can also add widgets to your Today View by swiping right from your home screen and to a given by the control of the screen. Tap and hold widgets to edit or remove them around. You can also add widgets to edit or remove them around. You can also add widgets to edit or remove them, or tap, hold, and drag them to move them around. You can also add widgets to edit or remove them, or tap, hold, and drag them to move them around. You can also add widgets to edit or remove them, or tap, hold, and drag them to move them around. You can also add widgets to edit or remove them, or tap, hold, and drag them to move them around. You can also add widgets to edit or remove them, or tap, hold, and drag them to move them around. You can also add widgets to edit or remove them, or tap, hold, and drag them to move them around. You can also add widgets to edit or remove them. lock screen. On the Today View screen, tap and hold any area until the widgets begin to wiggle. Tap + in the upper left corner, select a widget and widget son your home screen so it doesnt become too cluttered. To add a the stack throughout the day to show information relevant to your time, location, or current activity, or you can swipe through them whenever you like. You can also build your own widgets that are already on your home screen. Press and hold the screen until the icons start wiggling, then drag and drop widgets on top of each other and then select Widget Suggestions On if you want apps relevant to your current activity to automatically appear in the stack whenever you choose can make a huge difference in the overall look of your home screen. To change your wallpaper, tap the Settings gear icon and select Wallpaper, then +Add New Wallpaper, Select one of iPhones built-in wallpapers, or choose an image from your photo gallery. Once youve picked a wallpaper you like, tap Add. Youll also be given the option to Set as Wallpaper Pair if you want to set your selection as both your Lock Screen and Home Screen wallpaper.[7]You can even choose a live or animated image from your gallery, or select one of the built-in dynamic wallpapers, if you want to add a little movement to your want pour wallpaper to cycle through different images throughout the day. You can also select automatically generated wallpapers made from your photos under the Suggested Photos header. To make the image to shift slightly depending on the angle of your phone, toggle on Perspective before you set your wallpaper. If youre planning to use custom icons and widgets, then a solid color or a simple pattern that wont clash with your icons will work best for your wallpaper. [8] 4Download an app that lets you customize your widgets, theyre pretty limited. Fortunately, there are several apps on the market that allow you to get a lot more creative. A few popular options include Themify, Color Widgets, Widgets also offer custom app icons and Flex Widgets are primarily focused on widget customization, while Themify and Flex Widgets also offer custom app icons and wallpapers. Custom widget apps like Widgets also offer custom widget apps like Widgets allow you to change elements of the widget such as the font, color, border image, and other information that can appear on the widget (such as the time and date). 5Use the Shortcuts app to create new icons. Shortcuts is a built-in app in iOS. Shortcuts is a built-in app in iOS. Shortcuts allow you to use features of your apps without directly opening them. They also offer the opportunity to customize the look of your home screen, since you can create custom icons for each shortcut. To make your own custom icons:[9]Open the Shortcuts app. Tap the + icon in the top right corner of the screen. Select Add Action. In the search bar that appears under Scripting. Tap the pale blue App button next to the Open App icon, then select the Open App option that appears under Scripting. Tap the pale blue App button next to the Open App icon, then select the Open App option that appears under Scripting. choose an app from the list of apps that appears. Tap the down arrow icon to the right of the name of your shortcut in the top center of the screen. (In older versions of iOS, tap the button that looks like a pair of sliders instead.) Select Choose Icon. Pick the custom icon youd like to use for your app. In the same menu, rename your shortcut with the name of the app. Finally, tap Add to Home Screen in the same menu. Tap Done in the top right corner. To remove the old app icon, tap and hold it, then tap Remove App. Select Remove from Home Screen from the popup menu. If you dont want to see a notification every time you use a custom app icon, you can turn them off. 6 Customize your Lock Screen. If you have iOS 16 or later, you can customize button appears. To do it, touch and hold any spot on your Lock Screen until the Customize button appears. Tap the button, and then:In the pop-up menu, select Customize Current Wallpaper. Swipe through the options at the bottom of the screen to see different styles you can apply, such as a color wash or a gradient backdrop. Tap the date and time at the top of the screen below the date and time. Tap x to close the menu after adding a widget. Tap Pinch to Crop to adjust the cropping of your lock screen wallpaper. Tap the button in the bottom right corner to access additional options, like Extend Wallpaper and Depth Effect. When your efinished making changes, tap the blue Add button in the top right corner of the screen. Advertisement Who says iPhones lack home screen customization. Easily move apps around the home screen with themed widgets, folders, app icons with custom photos. Use third-party apps like Color Widgets to add custom widgets to your home screen, complementing the theme and aesthetic you desire. There are so many different ways to add personality to your iPhone or even adding a PopSocket to the back of your iPhone -- the options are endless Now, using custom icons, widgets, and folders, you can customize your iPhone home screen (and even the lock screen) beyond just adding a new wallpaper picture. Related Need to catch up on what's new in iOS 17? We gotchu. Here's everything you need to know about your iPhone home screen for in items and in items and in items and in items and items and items are not in items and items and items are not in items are not in items. holidays like Halloween or Valentine's Day is a fun way to immerse yourself in the festive spirit. Picture transforming your screen for Halloween with spooky widgets that count down to the big night, accompanied by a wallpaper that's a blend of shadows and jack-o'-lanterns. Beyond that, you can revamp your app icons to match the theme -- imagine eerie skull icons for your messages or a witch's cauldron for your favorite delivery app. Your apps could be neatly organized into folders named with a bit of Halloween flair too -- think "Witches' Brew" for your food apps. For Valentine's Day, the customization can take a sweeter turn with widgets displaying heartfelt quotes or countdowns to a romantic evening, complemented by a wallpaper adorned with hearts or roses. Custom icons for your messaging apps like a musical note wrapped in a heart for Spotify. You can organize your messaging apps like a musical note wrapped in a heart for Spotify. You can organize your messaging apps like a musical note wrapped in a heart for Spotify. celebrate the holiday; it allows you to make a personal statement, showcasing your personality and interests through a device that's with you 24/7. To get started, you need an iPhone home screen Only show apps you want to see and actually use To start things off, if you're stuck on how to actually move apps around your home screen until the app icons start to jiggle, or long-press on any individual app icon and tap Edit home screen on the menu that appears. Tap and hold on an app and drag it around the display to move it. Drag it to the edge of the screen to move it to a new screen. Drag it down to your dock at the bottom of your display to add it there. Julian Christ / Unsplash If you're happy with moving apps around individually, but you'd like to group a bunch of them in one place for convenience, folders are a great way to do just that. Here's how Long press on an app to move it. Drag and drop the app onto another on your home screen. Next, tap into the new folder and rename it if you prefer, by tapping on the "x" next to its name. If you're looking to remove an app from a folder, just open the folder, then long-press on the app in question and drag it out of the folder back onto the home screen. Etsy: MagnifiqueStudio Get your thinking cap on - because this one requires some creativity. Trim your apps Before getting started, trim the number of apps on your home screen, it'll take less time if you only have a few. To remove an app, hold down on one, select Remove App, and confirm. You aren't deleting it off your phone; just swipe from right on your home screen to search for it. Apple has a support page with extra information and tips about how to neatly organize your home screen and make perfect use of the App Library. Related Google's next-gen Pixel 9 flagship lineup is expected to land this fall -- here's what rumors indicate to us right now. Find app icons to use Once you have a select few apps on your home screen, go find some photos on the internet or in your camera gallery that you want to turn into app icons. On Etsy, sellers offer thousands. of themed icon packs you can buy and download online in a matter of seconds and for super cheap. There are also apps (like Color Widgets) and websites (like Flaticon) that offer free icons for you to download and use. Or, you can use a photo you took and saved. If you're going for an aesthetic, stick with a theme. Those of you going with Halloween for instance, could try pics of bats, witches, etc, for icons. Related The iPhone 15 Pro Max has more features compared to the 14 Pro Max, but is it worth the upgrade? Let's take a look. Make app shortcuts to replace the app icons on your home screen with all the icons and photos you curated in step two above. You just create a shortcut for an app and then add it to your home screen. It will look like an app and work like one - but it'll have the custom icon and name you gave it. In the Shortcuts app, follow these steps: Tap the + in the corner. On the new shortcut pane, tap Add Action. In the menu that pops up, search for and select Open app. On the new shortcut pane, tap on 'App' to select the app you want to open. Click the drop-down at the top (next to Open app) to access the details pane, tap Add to Home Screen. On the preview pane, tap the shortcut name field (under Home Screen Name and Icon). Delete the words "New Shortcut" and enter a new name for the app. Tip: Perhaps use the name of the app you're trying to open (like "TikTok"). Now, tap the icon next to the shortcut name (again, under Home Screen Name and Icon). In the edit icon menu that pops up, select Choose photo. Your photo gallery will pop up. Select a photo you want to use as an icon. On the preview pane, tap Add. Now leave Shortcuts and look at your home screen to see the result. You should see the app shortcut you created with a custom icon and name. Remove the original app from your home screen to see the result. You should see the app shortcut you created with a custom icon and name. Remove the original app from your home screen to see the result. You can make custom shortcuts app, you can get extra creative. You can make custom shortcuts app. You can make custo YouTube video or message your partner on Snapchat or launch Shazam. The possibilities are endless. You can really go overboard creating app shortcuts and icons for everything. Apple has a support page with extra information and tips about how to use the Shortcuts app to maximize your iPhone experience. Etsy: MagnifiqueStudio There are several apps in the Apple App Store you can use to create a widget and add it to your home screen. Widgets are both popular examples. With them, you can pin a small, medium, or large photo to your home screen. For instance, if it's Halloween, add a pumpkin photo. For the purposes of this guide, we will tell you how to easily use Color Widgets because it has a better UI than Widgets and go to the Widgets tab. You will see premade widgets tab. You will see premade widgets tab. You will see premade widgets tab. You can then set a specific style. Try tapping on Add Photo to change the photo, for instance. In the photo gallery that pops up, select a photo and confirm the crop. On the customise screen, you can add a theme and font and border color. When done customising, tap Set Widgets, go to the home screen, and press down in an empty area. Tap the + in the corner. Search for the "Color Widgets" widget. When it opens, go to the size widget you want to add and then select Add Widget. It will then be added to your home screen. You may need to edit your widget customization apps. For instance, many of them cost money to use after their free trial expires. They also add their name to the widget on your home screen and either don't allow you to remove the name or they make you pay extra to do so. Finally, the widgets themselves are often very limited. They can be a clock or calendar, and not much else. Etsy: MidnightPop You should probably also change your iPhone's home screen wallpaper to finish the aesthetic makeover you're trying to achieve. Don't know how? Apple has a support page with more information, but here's the quick version: Go to Settings on your iPhone, tap Wallpaper, then select Add New Wallpaper. Easy peasy. Those of you who want to go a step further should also change your lock screen to something more on theme. You could even go all out and use a video wallpapers that move when you press down on the screen. Neat, right? Check out our guide to learn more: How to turn any video into a live wallpaper for your iPhone lock screen. Related I wanted to love Assassins Creed Mirage on the iPhone. Heres why I didnt. A major new feature with iOS 16 is the ability to make custom Lock Screens. You can add widgets, fonts, photos, wallpapers, and more. Pocket-lint has an entire guide dedicated to showing you - step by step - how to new wallpaper. Select the blue + icon and choose a wallpaper from the options. You will see suggested photos, photo shuffle, emoji, weather, astronomy, color, and featured wallpapers When you select or customize a wallpaper from the options. You will see suggested photos, photo shuffle, emoji, weather, astronomy, color, and featured wallpaper from the options. You will see suggested photos, photo shuffle, emoji, weather, astronomy, color, and featured wallpaper from the options. You will see suggested photos, photo shuffle, emoji, weather, astronomy, color, and featured wallpaper from the options. You will see suggested photos, photo shuffle, emoji, weather, astronomy, color, and featured wallpaper from the options. can also tap the ... icon to add a depth effect. Select Add Widgets to add a widget. You will see birthdays, calendar, battery, and more. Tap to choose one. If you want to change the font and color of your font on the clock and pick your preference. When done, tap Add in the corner. You can choose to set it as a wallpaper pair (it will change your home screen). Or you can customize your home screen. If you select to customize, you will have the option to change its color, gradient, photos, and blur. Set it when you're done and that's it! Related Pocket-lint has detailed how to customize your iPhone lock screen with iOS 16, and we tried to answer any questions you may have along the way. FAQ Q: Is there an app or service that will do all this for you? Yes, actually. Search "home screen" in the app store. You will see apps like Brass, Aesthetic Kit, and Themify that allow you to quickly and easily change your home screen and lock screen aesthetic. This guide explains how to do it yourself. Doing it yourself gives you way more customization options and allows you to be more creative. But if you don't want to put too much time or effort into it, use an app. Q: What does an 'iPhone home screen aesthetic' actually mean? An "iPhone home screen aesthetic actually mean? An "iPhone home screen aesthetic" is all about making your iPhone's main screen uniquely yours by customizing how it looks to match your personal style. It involves picking out themed app icons, wallpapers, and widgets that all fit together perfectly. Youve probably seen some of the beautiful custom iPhone Home Screen layout, icons and widgets. It makes sense. After all, you open your phone and look at your Home Screen dozens (or even hundreds) of times every single day. A custom Home Screen that matches your style can bring a little spark of joy to your daily life every time you whip out your iPhone. And iOS 18 makes Home Screen customization easier than ever. Keep reading (or watch our video) for a quick introduction into the world of custom Home Screens. Youll find out about new features coming in iOS 18, how to go above and beyond using Shortcuts, and how you can top off your iPhone aesthetic with widgets. Ive scoured the internet (Reddit, mostly) to find the finest examples. Customize iOS 18 Home Screen layout, icons and widgets1. On iOS 18, use a dark backgroundiOS 18 opens up new customization options. Screenshot: Wendell S/Digital Leader/redditiOS 18 which is available now in Settings > General > Software Update opens up loads of customization options. You can set your Home Screen to use Dark icons or Tinted icons with any color you want. However, bear in mind that the Tinted icons still use a Dark color scheme. That means youll achieve the best results if you employ a moody, dark iPhone wallpaper with a complementary accent color for the icons. If your elect Tinted, you can find a color using the sliders, or you can tap the eyedropper icon in the upper right of the panel to select a color based on your wallpaper. You also can tap the sliders, or you can move app icons and folders to the bottom of your iPhone screen for the first time. Apple really opens up your options for iPhone customization in iOS 18.2. Go all-in on fully custom icons. Screenshot: MicrosuedeMouse/X/StorageRich3317/redditApples options for iPhone Home Screen customization in iOS 18 are easy to set up, but somewhat limited. For one, the Dark and Tinted icons dont look great with a light theme. If you want any pastel colors, like light pink, lavender or aqua blue, youll need to make your own custom app icons. Ever since custom icon packs online from websites like Icons8. Click on a collection, then search for an icon inside that collection (like YouTube, Instagram, Mail, etc.) and download the images. You should end up with a series of icons in your photo library. These custom Home Screens take a lot of commitment to make, but the results speak for themselves. Screenshot: Mark JCW/trakkito/redditCustom icons dont need to be all about changing your iPhones color scheme. The icon set above looks just as colorful as the stock icons, but it changes the aesthetic gentle colors and softer shadows. Create a custom app launcher using Shortcuts. Screenshot: D. Griffin Jones/Cult of MacTo swap out your apps old icons for the new ones, youll need to set up a bunch of Shortcuts. Open the Shortcuts app, tap + in the upper-right corner, then tap Open App. Tap App, then select the app you want to add. Thats all the Shortcut needs to do. Hit the Share button in the bottom toolbar and select Add to Home Screen. Heres the important part: Type in the name of the app, select the icon on the left, and tap Choose Photo. Then, select the custom icon you added to your photo library. Tap Add to put it on your Home Screen. (Remove from Home Screen.) It can be a tedious process if you have a lot of icons, but the results speak for themselves. These Home Screens get really creative. Screenshot: oddloop\_lol/Carlanatorr64/XThere is one important thing to note about this kind of setup. Whereas the iOS 18 icon customization feature affects icons everywhere on your iPhone, including the App Library, adding these Shortcuts only affects icons on your Home Screen. Thats because youre not really changing the icons themselves; youre making new ones for your Home Screen. This iPhone customization hack also comes with two somewhat annoying side effects. First of all, the custom icon wont show notification badges. Secondly, when you tap on the icon, youll see a banner at the top of the screen reminding you that you just ran a Shortcut. This cannot be disabled, even in iOS 18.Personally, I use custom icons in a more subtle way. I use the stock iOS 18 dark mode, because I like the color differentiation. But for the three third-party apps on my Home Screen Snapchat, Mona and NetNewsWire I made my own dark mode icons that match Apples theme.3. Enhance the look of your iPhone Home Screen with custom widgets A lot of the widgets that come built-in are functional and utilitarian, not necessarily beautiful. If you use the Tinted app icons, your widgets will adopt the same color scheme, but the results still may not look ideal. Using an app like the viral sensation Widgetsmith, you can add beautiful widgets that enhance your aesthetic. In the image below, you can see all the options are combined for a truly unique and personality of a Home Screen. Screenshot: heartoutchloe/ThereIsNoDog96/redditWith Widgetsmith, you can add calendar widgets, weather widgets, countdown widgets or simple photos that do nothing but look gorgeous. The options for custom colors and fonts are guaranteed to match your personal style. With new tools coming in iOS 18, people will be able to more easily create their own unique aesthetic, said Stephen Hackett, the managing director for Widgetsmith, in an email to Cult of Mac. The people behind Widgetsmith update the app very regularly. The app adopts all the latest iOS features, like widget interactivity, with fresh styles every few months to inspire you. Hackett also told me that this year, when users update to iOS 18, they will be able to customize Control Center with third-party widgets made using the app, too. Price: \$1.99 per month or \$19.99 per yearDownload from: App StoreMore daily inspirationIf you want to see more of whats possible, you should check out the Cult of Mac Today newsletter. Every edition is delivered to your email inbox with a nifty new wallpaper, in addition to the days top news, reviews and how-tos. You can sign up right here for a daily dose of fun and inspiration in your inbox. More top features in iOS 18: And check out the full list for even more. We originally published this post on how to customize the iPhones Home Screen layout in iOS 18 on June 22, 2024. We updated the information.
