The world of paving has undergone a significant transformation, transforming a straightforward DIY project into an opportunity to unleash your creativity and create functional yet visually appealing spaces in your home and garden. For inspiration, Bunnings Workshop's creative community members have shared their stunning projects, showcasing various techniques and ideas for side access paving, bike shelters, small yard makeovers, and more.From revamping a side alleyway with charcoal-coloured paving and river pebbles to creating a bike shelter and paver area in the backyard, members like @Yorky88, @weekenddiyer, and @marliemakesit have pushed the boundaries of what's possible. Others, such as @Lmassih and @TaylerMayd, have successfully transformed their side paths using recycled materials like bluestone rounds and Travertine pavers.Not only do these projects offer a glimpse into the world of paving, but they also provide practical advice and step-by-step instructions for those looking to tackle the project themselves. Bunnings Workshop member Adam has created a handy guide on how to lay paving for a path, complete with tools and materials required.For those struggling with tree stumps, an effective solution involves using Epsom salt or glyphosate, which can be applied through drilling holes in the stump and filling them with the solution. This method may take several weeks to work, depending on the size of the stump and environmental conditions.In addition to paving and tree care, Bunnings Workshop members have also showcased their creativity in wainscoting feature walls in various rooms. From adding a cost-effective wainscot panelling wall behind a bedhead to creating a stunning dining area feature wall, these projects demonstrate the versatility of this design element.Wainscoting for a Cozy and Elegant Home - 10 Inspiring DIY Projects by BunningsThe team at Bunnings has been busy showcasing their creativity in wainscoting DIY projects, resulting in stunning dining room feature walls. Board and batten feature walls have become increasingly popular with the use of MDF panels, moulding, and fresh paint. Homeowners can create a stylish entryway by incorporating storage cubes, MDF wainscoting, and blue "Vintage Denim" paint. Kids bedrooms are also being transformed with reading nooks featuring Wallpaper, storage cubes, and MDF wainscoting.Wainscoting has been used to brighten up the entryway with the addition of wallpaper and a feature wall. It adds a touch of sophistication to any room. The Bunnings team has created an easy-to-follow guide on how to install DIY wainscoting, making it accessible for everyone. Get more inspiration from features such as VJ panelling projects and 10 ways to decorate a wall.One community member shared their experience with creating a beautiful garden shed using recycled materials from a Bunnings store. The project took nearly two years to complete but was finally finished after overcoming health issues and multiple breaks due to accidents. The shed's interior features plywood, wool insulation, and Dulux water-based paint, while the exterior boasts boxing wood and barn doors.This creative DIY project highlights the importance of repurposing old materials and following a well-structured plan. With patience and dedication, homeowners can create unique wainscoting designs that add character to their home's interior and exterior. The Bunnings community is always eager to assist with more inspiration and advice.i'm so happy with my outdoor entertaining area, it's exactly what i wanted! thanks to my hubby will brown and cuz bruce williams for making my dream a reality - i feel super lucky! now i can create and relax in a space that inspires me. love the jarrah pergola with festoon lights, it transformed our side yard into a stylish area perfect for outdoor entertaining. some other great ideas from bunnings workshop members include: a three-tier deck and pergola by itai, a gable pergola by jimi jim i, and a custom-built pergola over a low-level deck by diygals lauren and sarah. if you're planning to build your own pergola, check out bunnings' videos on how to build a pergola, including the frame and roof construction. also, don't forget to ventilate your home properly - open windows and doors regularly, use door wedges to prop them open, and keep wardrobes and cupboards open for good air circulation. regular cleaning and some helpful tips can also help manage mould growth in damp areas like bathrooms and kitchens.To combat moisture issues in your home, consider installing exhaust fans, dehumidifiers, or using moisture-absorbing products like DampRid Refillable Moisture Absorbers. Placing oscillating fans strategically can also enhance ventilation. Additionally, use open shelving units or plastic containers for storage to prevent moisture buildup. Repainting problem areas with mould-resistant paint and applying a mildew inhibitor like Protite Mould Defender can help protect against mould growth. Using plants that absorb moisture, such as peace lilies or spider plants, and regularly maintaining gutters can also contribute to reducing dampness in your home.Hardwoods come from flowering trees such as eucalyptus and are more naturally durable, stronger, and denser timbers. They can be heavy and harder to work with than softwoods like pine. For example, Merbau decking is a hardwood, while Pine decking is a softwood. The use of timber in construction projects such as decks, house flooring, and cantilevered balconies requires proper classification and rating to ensure safety and structural integrity. There are two primary rating scales: F for hardwoods and MGP (machine-graded Pine) for Pine, with different ratings indicating varying levels of strength and durability.For example, MGPI0 is suitable for general use in building work and framing of walls, while MGP12 is recommended for more heavy-duty applications such as framing of walls and some floor joists. In contrast, F ratings range from F1 (weakest timbers) to F24, with specific types like Blue Gum and Merbau exhibiting higher ratings.Manufactured timbers, such as LVL (Laminated Veneer Lumber), are increasingly used due to their consistency in smoothness, strength, and other properties. These engineered timbers can be produced in long spans that would be difficult or impossible with natural timbers.Other manufactured timbers include laminated veneer lumber, finger jointed timber, medium-density fibreboard (MDF), and particle board. MDF is often used for shelves, cabinets, door panels, and other decorative elements, while particle board is commonly found in kitchen cabinets and flat-pack furniture.For clogged drains, a combination of methods can be employed to clear the blockage. This may involve breaking up debris, pushing the blockage through the drain using a plunger or snake, and dissolving any remaining blockages with enzyme drain cleaner.
