In situations where you need to send an incoming call to a different person (for example, another colleague), you can use call transferring, so that the transfer of call to work, different conditions must be met: TotalView It is running together with Broadworks with Remote Control Office Activated or AppOffice with mobile Twinning activated The Caller is calling the local user device, ie the call takes place via the PBX how to transfer an incoming call after replied to an incoming call You can transfer Thata call by minimizing the call screen, totalview opening, eun open to both view contacts or the call log. In the contact view, choose a person and click on the transfer icon next to its name and move to the calus to its local device. In order to select a different number from That person, you can go to your contact details and click the SAMEA button for the Respective number,. In the call log, open the keyboard, type a phone number and click the Transfer icon: Blind transfer and consult it at the moment you can not put a user waiting while consulting, aa connects. This means that all transfers via a smart client € Transfersi area, blind in which the initial call is interrupted as soon as the transfer is started. If a person does not respond to a transferred call, â, the call is usually reconnected to A. To change these settings, refer to the specific PBX settings. Last edition on 6 December 2019 If you have zoom of the phone activated on your account, you can transfer a call in progress. There are three call transfer methods: hot transfer, blind transfer, and transfer to the voice box. Note: When a call is transferred, the caller ID displayed separately receiving the transfer depends on the fact that they are an internal or external number. The administrator can restrict the ability to transfer calls to internal and / or external contacts. Contact your administrator for more information. If the administrator has allowed automatic registration, or a call registration is started, the recording ends when a transfer option is selected. This applies to the transfer of external or internal contacts. If you select Hot Transfer, you can start recording again to record the part before completing the transfer. This article concerns: Desktop Client Transfer Methods App for Mobile Devices Prerequisites Zoom Client Desktop Windows: at 4.4.52570.0415 or MacOS higher: 4.4.52551.0414 or higher Linux: a 3.0.285090.0826 or higher application for Android phone Zoom: 4.4.52504.0411 or iOS Superiors: 4.4.4.0 (52578.0415) or higher zoom license phone call transfer enabled administrative transfer methods you have access to three transfer methods on desktop client and mobile app: hot transfer : Places the call waiting while completing the transfer. This option is useful if you need to move an automatic answering machine for the caller or if you want to talk to the recipient before the call is transferred. Transfer blinds: Transfers the call to the number and hang up the call immediately. If there are any requests from the phone menu, the other party will have to complete them. Transfer to the Secretariat: Transfer the call to the answering machine of a specified phone number. This transfer method may not work for all numbers. You can also transfer to the Secretariat via DTMF Codes.â, Desktop Client Access the Client Desktop Zoom. Clickâ, Phone. Follow the instructions to carry out or a call. During a call, click Transfer. Compose a number for transfer to. You can also enter a toa name to search for your contacts, eun internal external synchronized. Click the Blue Transfer button and select a transfer method. If hot transfer has been selected, the current call is put on hold, while it connects to the compound number. Click Transfer Completed to transfer the call and hang up the phone. Youâ € can use most controls, in call before completing the transfer. Click Cancel Transfer, if you want to cancel the hot transfer and return to the original call.â, app for mobile devices Access the Mobile App Zoom. App. Follow the instructions to make or receive a call. During a call, click Transfer. Compose a number or touch the contact icon Â € to search for your internal, external and telephone contacts. Touch a contact to call them. Tap the Blue Transfer button and select a transfer method: if the hot transfer has been selected, the current call will be positioned on hold while connecting to the compound number. Tap the complete transfer to transfer the call and hang up the phone. You can use most in-call controls before completing the transfer. Transfer Cancel stage if you want to cancel the hot transfer and return to the original call. This article was useful? Find out how to forward calls from an iPhone, an Android phone or a fixed network to a different phone number: In this way, you can set call forwarding to the landline, for example, to automatically transfer an incoming call on your mobile device, so you won't miss important calls when you are not at home. Or, configure call forwarding to your smartphone and transfer calls to any fixed network or mobile number. The instructions in this article apply to call insertion on a fixed device, Android and iOS. Getty Images Follow these steps to configure call forwarding to your landline. Get a phone that is connected to the fixed network and dial \* 72. If your vector is T-Mobile or AT & T, dial \* 21 instead of \* 72. Wait for an acoustic signal or a prompt that requires you to insert a telephone number. Enter the ten digits, starting with the area code, the phone number you want to submit calls. Press the # key after entering the phone number. Wait for confirmation. This can be an acoustic signal or a rattle sound. Hang up the phone and test. Follow these steps to configure call forwarding to an Android device. Open the phone application. Select the menu icon in the upper right corner. Select the Settings option from the menu. Previous versions of Android can tell the call settings instead of the settings. Select calls from the menu. Select call forwarding. Make a selection from one of the following options: always forward: all calls are forwarded. Forward when you are busy: calls are forwarded when you are currently on another call. Forward when not canceled: calls are forwarded when you do not answer the call. Forward if not solved: calls are forwarded when the phone is turned off, in plane mode or has no signal. Enter the phone number to which you want to submit your calls. Select enable or OK. Follow these steps to configure call forwarding to an iOS device. Open the settings app. Select phone> Call forwarding. If you don't see this option, your mobile carrier does not allow call forwarding to your account. Contact your courier to add the service. Activate call forwarding. Select Next. Enter the phone number to which you want to submit your calls. Thank you for letting us know! Tell us because! Something went wrong. Wait a moment and try again.
